SUMMARY

3rd year B.Tech CSE (AI & ML) student at VIT Bhopal with hands-on experience building end-to-end AI systems — including RAG pipelines, NLP dashboards, and production-style automation workflows. Proficient in Python, LangChain, and n8n, with practical exposure to LLM integration, vector databases, REST APIs, and cloud deployment. Actively building in public and looking to contribute to real-world AI/ML projects through an internship.

PROJECTS

Personal RAG Chatbot – Document Q&A with Local LLM

[Github](#)

- Built an end-to-end RAG pipeline that ingests personal documents, generates vector embeddings via HuggingFace sentence-transformers, stores them in ChromaDB for semantic search, and serves responses through an interactive Streamlit UI with PDF upload, conversation memory, and source chunk visibility — powered by Llama 3.2 via Ollama for fully offline inference.

ArthSakshar – AI-Powered Financial Literacy App

[Github](#)

- Developed a financial literacy mobile app with Flutter and Firebase, integrating multiple AI microservices built on FastAPI and Gemini API — including an AI chatbot, text-to-speech, a financial quiz generator, fraud alert system, and voice chatbot — as part of a team project under the EPICS program.

n8n Automation Workflows – AI-Powered News & GitHub Digests

[Github](#)

- Built production-style automation workflows using n8n — including a daily Hacker News digest that fetches top stories, generates per-story AI summaries via Groq (Llama 3.3), and saves to Notion, and a GitHub Weekly Digest that summarizes commit activity and delivers a formatted email via Gmail.

Reddit WallStreetBets Sentiment vs Stock Price Analysis

[Github](#)

- Analyzed 53,187 Reddit posts from r/WallStreetBets using VADER sentiment scoring, lag correlation, and Granger causality testing to investigate whether social media sentiment predicts meme stock price movements — deployed as an interactive Streamlit dashboard with dynamic stock selection and adjustable lag controls.

EDUCATION

2023 - 2027	B. Tech at VIT Bhopal University	(GPA: 8.75)
2023	Class 12th CBSE Board	(88.4 %)
2021	Class 10th CBSE Board	(91.2 %)

CERTIFICATIONS

- Oracle's Generative AI Certificate: [Certificate](#)
- NPTEL in Cloud Computing: [Certificate](#)
- Japanese N5: [Certificate](#)
- Applied Machine Learning in Python: [Certificate](#)

SKILLS

Programming:	Python, NumPy, Pandas, Matplotlib, Streamlit, NLTK
AI/ML Tools:	HuggingFace, ChromaDB, Ollama, LangChain, FastAPI, Groq, n8n
GenAI & Agents:	RAG Pipelines, LLM Integration, Prompt Engineering, Workflow Automation
Data Tools:	Jupyter Notebook, Git/GitHub, SQL
Soft Skills:	Problem-solving, Communication, Teamwork
