SUMMARY

Final-year B.Tech student at VIT Bhopal with practical experience in Agentic AI, Generative AI, and backend engineering. I have built and deployed a multi-agent data analysis platform in production using LangGraph, Groq, and FastAPI. My work spans LLM pipelines, RAG systems, and async task queues, and I am comfortable taking a project from design to deployment. Currently looking for an AI engineering role where I can work on real problems and keep building.

PROJECTS

NEXUS - Multi-Agent Data Analysis Platform

 [GitHub](#) | [Live Demo](#)

- Developed a full-stack multi-agent AI platform that runs 3 specialized LLM agents (EDA, Statistical, and Insight) through LangGraph on Groq's LLaMA 3.3. A user uploads a CSV file and receives a structured PDF report with no manual steps required in between.
- Wrote the backend using FastAPI, PostgreSQL, Redis, and Celery workers for async task processing. Dataset cleaning, ML model training, and report generation all run in parallel without blocking the main application thread.

Personal RAG Chatbot - Document Q&A with Local LLM

 [GitHub](#)

- Built a fully offline RAG pipeline that reads personal documents, encodes them using HuggingFace sentence-transformers, and stores the vectors in ChromaDB for accurate context-aware retrieval. No external API calls are made at any point.
- Created a Streamlit interface with PDF upload support, session-persistent conversation memory, and visible source chunks. All inference runs locally through Llama 3.2 via Ollama with no cloud dependency.

Nova - Local-First Personal Assistant OS *(In Progress)*

 [GitHub](#)

- Building an on-device personal assistant on Ollama (Llama 3) that brings together a GitHub project dashboard, Gmail agent, Pomodoro timer, file tracker, and task manager into a single FastAPI and React interface.
- Implementing a two-layer memory system where ChromaDB handles semantic search across past sessions and SQLite manages structured data persistence. Nothing is sent to external servers.

EDUCATION

2023 – 2027	B.Tech in Computer Science at VIT Bhopal University	GPA: 8.90 / 10
2023	Class 12th, CBSE Board	88.4%
2021	Class 10th, CBSE Board	91.2%

CERTIFICATIONS

- Oracle Cloud Infrastructure - Generative AI Professional [View](#)
- NPTEL - Cloud Computing [View](#)
- Applied Machine Learning in Python - Coursera, University of Michigan [View](#)
- Japanese Language Proficiency - N5 Certified, currently pursuing N4 [View](#)

SKILLS

Languages & Libraries:	Python, NumPy, Pandas, Matplotlib, Streamlit, NLTK
AI/ML & Agents:	LangChain, LangGraph, HuggingFace, Ollama, Groq, RAG Pipelines, Prompt Engineering
Backend & Infra:	FastAPI, Redis, Celery, PostgreSQL, SQLite, ChromaDB
Automation & Tools:	n8n, Workflow Automation, Git/GitHub, Jupyter Notebook
Deployment:	Vercel, Render, Docker (basic)
